Projects

ICheck

For: https://masystems.com.au

Date: 2017

You have definitely seen many, many checklist apps in different app stores, but have you ever used them in real life? Well, we did! and unfortunately most of them fail performing simple tasks. What you will find using in-the-market checklist apps is that, they are very complex and it takes up too much time and lots of efforts to create and use a simple checklist. Of course it all goes back to "what do you want from a checklist app?" Our answer, "Simple Checklist!" And that's why we developed iCheck! iCheck is the most straight forward app in app stores that is simply a checklist. After signing in to your free account, you can immediately start creating your first checklist by selecting type of questions, description of questions and potentially multiple-choice answers. We will look after the rest by adding comments, pictures, signature, etc.
